

Table of Contents

Chapter I	Introduction.....	1
Chapter II	A Reconsideration of Some Issues in Structural Linguistics.....	19
	2.1 Bloomfield.....	22
	2.11 Antimentalism.....	22
	2.12 "Exclusion of Semantics".....	28
	2.2 "Autonomy of Form".....	34
	2.3 Post-Bloomfieldians.....	38
	2.4 "Mechanical Discovery Procedures".....	45
	2.5 Non-uniqueness and "Game Playing".....	54
	2.6 Prediction.....	79
Chapter III	Two Proposals Concerning the Role of Meaning in Linguistic Analysis and the Justification of Grammars.....	100
	3.1 Introduction.....	101
	3.2 Quine's Program for Linguistics.....	108
	3.3 LSLT: A Metagrammatical Approach to the Justification of Formal Grammars.....	130
	3.31 The Irrelevance of Semantic Notions to Grammar.....	147
	3.4 The Autonomy Thesis.....	179
Chapter IV	Language Structure, Linguistic Capacities and the Evolution of Generative Grammar from Formalism to Mentalism.....	197
	4.1 On Ascriptions of Capacities.....	201
	4.2 The Theoretical Representation of Linguistic Abilities.....	224
	4.3 In Search of "Explanatory Adequacy.....	244

Chapter V	Information, Meaning, and the Representation of Information as Language Structure....	287
5.1	An Overview of a Naturalistic Approach to Language Structure and Information....	288
5.2	Information and Meaning.....	310
5.3	Regularization.....	339
Chapter VI	Informational Structures of Language in a Subfield of a Science.....	372
6.1	The Research Problem and Corpus of Research Reports.....	377
6.2	Procedures of Analysis.....	386
6.3	Results of the Analysis.....	403
6.4	Adequacy as a Representation of Information.....	408
	References.....	418

ACKNOWLEDGEMENTS

It is a pleasure to record here my indebtedness and gratitude to the following for their comments and criticisms on parts or all of the manuscript: Michael Gottfried, Zellig Harris, Henry Hiż, Paul Mattick, Jr., Robert May, Sidney Morgenbesser, Charles D. Parsons, Wilfried Sieg, and Janis Vieland.

I owe a special thanks to Michael Gottfried for many years of conversations bearing not only on matters discussed here.

The patient efforts of Charles D. Parsons and Henry Hiż greatly promoted clarity in Chapters 3, 5, and 6. I am grateful to the National Science Foundation, Division of Information Science and Technology for support for the research reported in part here and to D. Reidel and the University of Chicago Press for permission to use the extended quotations in Chapter 2. Finally, without the constant encouragement of Pamela Wilson, completing this work should certainly have been an even more difficult task.
