

# Achumawi Database

## Summary of April 2023 work

You can download the current backup from

- <http://zelligharris.org/Achumawi/achumawi-db.html>

I have updated the webonary at

- <https://www.webonary.org/odissi/>

This has been a challenging month for coherent work. Much of what I was able to do involved changing the representation of some forms and recording some observations together with the old form in a note. Going back and forth between Baseline, Gloss, and Analysis views, and pasting data into a Note field, triggers a mysterious bug that causes FLEx to shut down with no error message. I have been running a program called OBS Studio (video recording and live streaming software to record everything that I do. When FLEx crashes, I stop recording and send a Dropbox link to the saved video of what I was doing just prior to the crash. Ken Zook and others are trying to use with these meager clues to figure out the problem.

Time has also gone into preparations for summer activities by the ILN. They need to find a location for teaching language and exemplifying how to set up domains in one's home.

For these and other reasons there are changes in the database, but no systematic report about them.
